

Our Equine Vaccine Protocol

We recommend your horse, donkey, or mule gets vaccinated and has a thorough exam every year. We vaccinate our equine patients with:

Flu Rhino

VEWT (Encephalitis Vaccine)

West Nile

Rabies

For our clients that travel with their horses to events, shows, trail rides etc. they must have a negative coggins done every year as well. We normally do these when they are brought in for their vaccinations.

We recommend you de-worm your pet 2-3 times a year for intestinal parasites. During exams of our equine patients our vets look at animals teeth.

At Lake Palestine Animal Hospital we do offer teeth floating with the use of our power floating equipment.
